

planting design: muker residence

4701 South Piccadilly Road, West Vancouver, BC

The planting design for Muker Residence is to enhance the site and the neighbourhood. The provided documents (Planting Plan, Plant List, Plant Photos) provide details indicating the plants chosen as suitable to the site and the site's particular micro-climates. Care was taken to select plants with a natural, native style; thereby blending in well to the site's environs and ensuring that these new plants will adapt and thrive on the site. Such plant selections are not in any invasive plant list. The plants selected when adapted to the site will provide soil stability with their root development which will assist in erosion control. The plants fit well with the neighbouring sites with muted, soft colors and filigree foliage.

The boulevard is currently overgrown and causing problems with overhanging branches and growth onto the street. The photos here show how a renovation approach to their current plants will not suffice. It is our opinion that new plantings will provide the best remedy for the boulevard.
